

- Create a function to check whether a number is positive, negative, or zero.
- Develop a function to determine whether a given year is a leap year.
- Implement a function to find the largest among three numbers.
- Write a function to check whether a number is even or odd.
- Design a function to assign grades based on student marks.
- Create a function to print the multiplication table of a given number.
- Create a function to check whether a number is zero.
- Create a function to check if number is prime.
- Create a function to return factorial of a number.
- Develop a function to calculate the factorial of a number using loops.
- Implement a function to generate the Fibonacci series up to N terms.
- Write a function to find the sum of all natural numbers up to N.
- Create a function to count the digits in a given number.
- Implement a function to reverse a string.
- Create a function to check whether a string is a palindrome.
- Develop a function to count vowels in a string.
- Write a function to find the frequency of characters in a string.
- Create a function to count the number of words in a sentence.

lambda tasks

Lambda to find square of a number.

Lambda to check even or odd.

Lambda to find maximum of two numbers.

Lambda to calculate cube.

Lambda to check positive or negative.

Lambda to add two numbers.

Lambda to sort list of tuples by second value.

Lambda with filter() to get even numbers.

Lambda with filter() to get vowels from string.

Lambda with map() to square list elements.

Lambda with map() to convert lowercase to uppercase.

Lambda with reduce() to find sum of list.

Lambda with reduce() to find product of list.

Lambda to check string length > 5.

Recursion tasks

Print numbers from 1 to n using recursion

Print numbers from n to 1

Find factorial of a number

Find sum of first n natural numbers

Count the number of digits in a number

Find sum of digits of a number
